

Solution Requirements

Date	7 July 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely log in using a username and password before accessing the system.	High
2	Authorization levels	Admin can manage applications and predictions; applicants can submit and track applications.	High

3	External interfaces	The system connects with the applicant database and ML prediction model.	Medium
4	Transactions processing	Process application submission, verify details, and generate approval/rejection prediction.	High
5	Reporting	Generate prediction reports and application status reports for administrators.	Medium
6	Business rules, etc.	Predict approval based on income, credit score, employment, loan amount, and repayment history.	High
7	Compliance to laws or regulations	Protect user information and comply with banking data privacy policies.	High
8	<i>Other</i>	Allow applicants to view prediction results and application status online.	Medium

Step 2: Non-Functional Requirements (NFR)

1	Performance & Speed	The system should generate predictions quickly.	Prediction within 2 seconds
2	Scalability	Support multiple users simultaneously.	Up to 1000 concurrent users
3	Security & Data Privacy	Encrypt sensitive applicant data and secure login.	AES-256 encryption
4	Reliability & Availability	The system should remain available with minimal downtime.	99.9% uptime
5	Usability & Accessibility	Provide a simple, user-friendly interface.	Easy navigation on desktop and mobile
6	<i>Other</i>	Easy maintenance and future model updates.	Modular architecture
