Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example similar) or	NO
6	Deployed application URL (if hosted)	NO
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NO
9	Test files and test results	YES

10	Demo video or walkthrough (if required)	YES
----	---	-----

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Credit-Card-Approval-Prediction/

```
Credit-Card-Approval-Prediction/

|— app.py
|— model.pkl
|— scaler.pkl
|— requirements.txt
|— README.md
|— train_model.py

|— dataset/
|   |— credit_card_approval.csv

|— templates/
|   |— index.html

|— static/
|   |— css/
|   |— images/

|— models/
|   |— random_forest_model.pkl

|— notebooks/
|   |— model_training.ipynb

|— tests/
|   |— test_prediction.py
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login (Demo)	Credentials [Provide demo username and password for evaluator access]

Platform / Hosting Provider	[e.g., Render, Vercel, AWS, Heroku, Azure]
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

- Python 3.10+
- Flask
- scikit-learn
- pandas
- numpy
- matplotlib
- VS Code or Jupyter Notebook

Steps

Step 1: Clone the repository.

```
git clone <repository-url>
```

Step 2: Navigate to the project folder.

```
cd Credit-Card-Approval-Prediction
```

Step 3: Install dependencies.

```
pip install -r requirements.txt
```

Step 4: Run the Flask application.

```
python app.py
```

Step 5: Open the browser.

```
http://127.0.0.1:5000
```

Step 6: Enter applicant details and click **Predict** to view the credit card approval result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Model accuracy depends on dataset quality	Improve by training with larger datasets
2	Application runs only on local server	Can be deployed on Render or Heroku later
3	Supports only predefined input features	Future versions can support more applicant details
